

Write, design, edit and capture **any** document in one app.

Documni is a document workspace for writing, design, editing and capture. Start with an idea, an existing file or a page on paper. Use tools shaped around the document, from a first draft to the copy you share.

Your documents. Wherever you work.

Web · Mac · Windows
iPhone · Android

Capture a page on your phone and continue on a larger screen. Write and edit offline, then sync the work you choose when you're connected.

A home for the whole project

Store your documents locally or in the cloud. Keep source files, drafts and finished copies together: the research with the manuscript, the brief with the presentation, the scans with the recreated book. Choose what to sync across your devices.

The right tools for the document.

Choose Writing, Screenwriting, Design, Presentations or Scans & PDF. Each mode gives you the structure the work calls for, with familiar ways to find your material, read, review and share.

Writing

Letters · Reports · Books

Write a letter, develop a report or work through a book chapter by chapter. Organise sections, refine the text and keep reference material close. Move between focused writing and a view of the whole manuscript.

Screenwriting

Scenes · Action · Dialogue

Build a screenplay around scenes, action and dialogue. Give each element its proper place and format, then step back to review the story's structure. Keep the script, research and supporting documents together through each draft.

Design

Posters · Layouts · Graphics

Create posters, page layouts and graphics. Arrange text, images and shapes, work with layers, and refine typography and spacing. Align and group elements to develop a clear, balanced composition.

Presentations

Slides · Charts · Speaker notes

Build a presentation slide by slide. Choose layouts, add charts and tables, and keep speaker notes alongside the story. Carry a consistent design through the deck, then switch to presenting.

Scans & PDF

Editing · Forms · Pages

Edit existing documents, arrange pages, complete forms and add signatures. Annotate a report or redact information from the copy you share. Read and annotate scans, with recognition available when you need to edit their content.

For teaching and learning

Teachers can adapt teaching material, create worksheets and prepare lessons and presentations. Students can organise reading, work with scanned extracts and turn research into essays or class projects.

For work and creative practice

Writers can develop a manuscript alongside its sources. Creatives can bring the script, visuals and pitch into one project. Teams can organise briefs, reports and the copies they share around the same work.

Turn images into editable documents.

Start with a screenshot, scan or photo. Documni recreates text, boxes, shapes, logos, graphics, charts and tables as separate elements you can select and edit with native tools.

Change chart data, edit table cells, rewrite text or move a logo. Keep the source alongside your changes. Bring a scanned book into Writing with editable paragraphs and chapters.

SCREENSHOT, SCAN OR PHOTO

EDITABLE DOCUMENT

Edit directly on the scan

Change existing text on a scan without recreating the whole page. Make a correction in place while keeping the surrounding page intact.

Capture a page or a whole book.

Capture pages on iPhone or Android with guided framing and automatic capture when the phone is steady. Correct perspective, flatten curved pages and reduce shadows and uneven lighting.

Scan several pages, check and arrange them, then save, share or continue editing on your phone or computer.

Your workspace and tools

Organisation, writing, screenwriting and design

Your workspace

Start and organise: new documents, file import, templates, recent work, projects, folders, favourites and document search; rename, duplicate and delete files; keep sources, drafts, assets and finished copies together.

Read and navigate: View and Edit; page thumbnails, outlines and section navigation; text selection, copy and find; zoom, fit page, fit width, full screen and focus view; adjustable reading text and reflow for structured books.

Review and return: comments, suggested changes, source comparison, undo and redo, version history; save, reopen and recover your work.

Store and share: local and cloud storage, offline document work, cross-device sync, sharing and access permissions; web, Mac, Windows, iPhone and Android.

Make it yours: language and accessibility preferences, keyboard shortcuts, command search, configurable tool panels, reusable personal details and saved signatures.

Writing

Text that flows between pages; paragraphs, headings, lists and styles; fonts, emphasis, colour, alignment, indentation and spacing.

Page sizes and orientation; margins, sections and page breaks; headers, footers and page numbering.

Section outlines and rearrangement; find and replace, word counts, focus writing, notes and research beside the draft.

Tables, images, figures and captions; footnotes, cross-references and contents.

Book chapters, scenes and synopses; front matter, body and back matter; manuscript organisation and revision.

Document and manuscript import, editable export and finished PDF output.

Screenwriting

Scene headings, action, character, dialogue, parentheticals and transitions; automatic element formatting with manual control.

Character and location completion; scene navigation, numbering and reordering; outlines, synopses and draft notes.

Title pages, screenplay pagination, dialogue continuations and dual dialogue; writing and page-preview views.

Script revision, comparison and review; control over whether private notes appear in an exported copy.

Fountain and FDX script interchange; screenplay PDF export.

Design

Compose: posters, flyers, covers, reports and visual documents; text, images, icons, shapes, lines, tables and charts.

Arrange: selection and multiselection; move, resize, rotate, duplicate, group and ungroup; layers and stacking order; alignment, distribution, snapping and guides; position and size locks.

Style: fills, outlines, line styles, opacity, rounded corners, shadows, linear and radial gradients; typography and image replacement.

Work with pictures: crop, flip and rotate; brightness, contrast and saturation; photo filters, filter intensity and reset; blur and pixelation effects.

Build with reusable assets: icon library; phone, browser and laptop frames; cards, statistic cards, quotes, buttons, badges and banners.

Templates

Letters, invoices, forms, agreements, consent forms, meeting notes, planners, sign-in sheets, lessons, certificates and proposals.

Document and capture tools

Presentations, recognition, scans and file formats

Presentations

Slide creation and ordering; themes, layouts and masters; text, images, shapes and visual assets.

Editable table rows, columns and cells; column, bar, line, area, pie, donut, sparkline and heatmap charts; chart data, labels and appearance.

Speaker notes, rehearsal, presenter view and an audience display.

PowerPoint import and export; full presentations, individual slides and PDF output.

Recognition and recreation

Screenshots, scans and photos to native editable text, boxes, shapes, separate logos, graphics, charts and tables.

Edit chart data and table cells; rewrite text; select, move, resize and restyle elements.

Typography, layout and reading order; document language; selectable, searchable text over the original image.

Recognise selected text, regions or pages; review lines beside source crops, correct uncertain details, preview and apply.

Scanned books to editable paragraphs and chapters for reading and writing.

Mobile capture

Capture documents, books and both sides of cards; import photos and files.

Automatic or manual capture; edge detection; framing, focus and lighting guidance; flash and duplicate checks.

Adjust corners and perspective; crop, straighten, rotate and flatten pages; reduce uneven lighting and shadows; enhance paper and text.

Multipage thumbnails; add, retake, reorder or remove pages; compare with the original; keep sources and recover interrupted sessions.

Recognise, edit, export and share captures in the same workspace.

Scans & PDF

Edit: text, images, drawings, highlights, comments and links; change existing scan text in place while retaining the surrounding page.

Organise pages: merge, split, extract and remove; reorder, duplicate, insert blank pages and import pages; rotate, crop and resize; add headers, footers, page numbers and watermarks.

Fill and create forms: text and date fields, checkboxes, radio groups and dropdowns; fill existing fields or add new controls; reuse personal details in selected fields.

Sign: type a name or initials, choose a handwriting style, draw or import a signature; place and resize it; reuse signatures and exchange password-protected signature files.

Protect information: redact content, password-protect a PDF and unlock it with its password.

Check and repair: compare text, layout and appearance across PDFs; use recognition in comparisons; export comparison reports as PDF or JSON; repair readable document structures.

Convert and export: PDF to Word with editable content or page-image layout; Word to PDF; images to PDF; PDF pages to JPG or PNG; searchable PDF; separate page images and image bundles.

Prepare delivery: compress PDF; choose file size, quality, page range and output format; preview and download a separate copy.

Documents and images

Import, edit, convert and export Word, PowerPoint, PDF, RTF and plain-text documents.

Work with JPEG, PNG, HEIC/HEIF, WebP, GIF, TIFF, BMP, SVG and AVIF images.

Spreadsheets

Open, edit and export spreadsheets in a workspace built around rows, columns and cells.
